INDESIT company

Model type:

FT85.1(RA)

Commercial code:

F029043

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

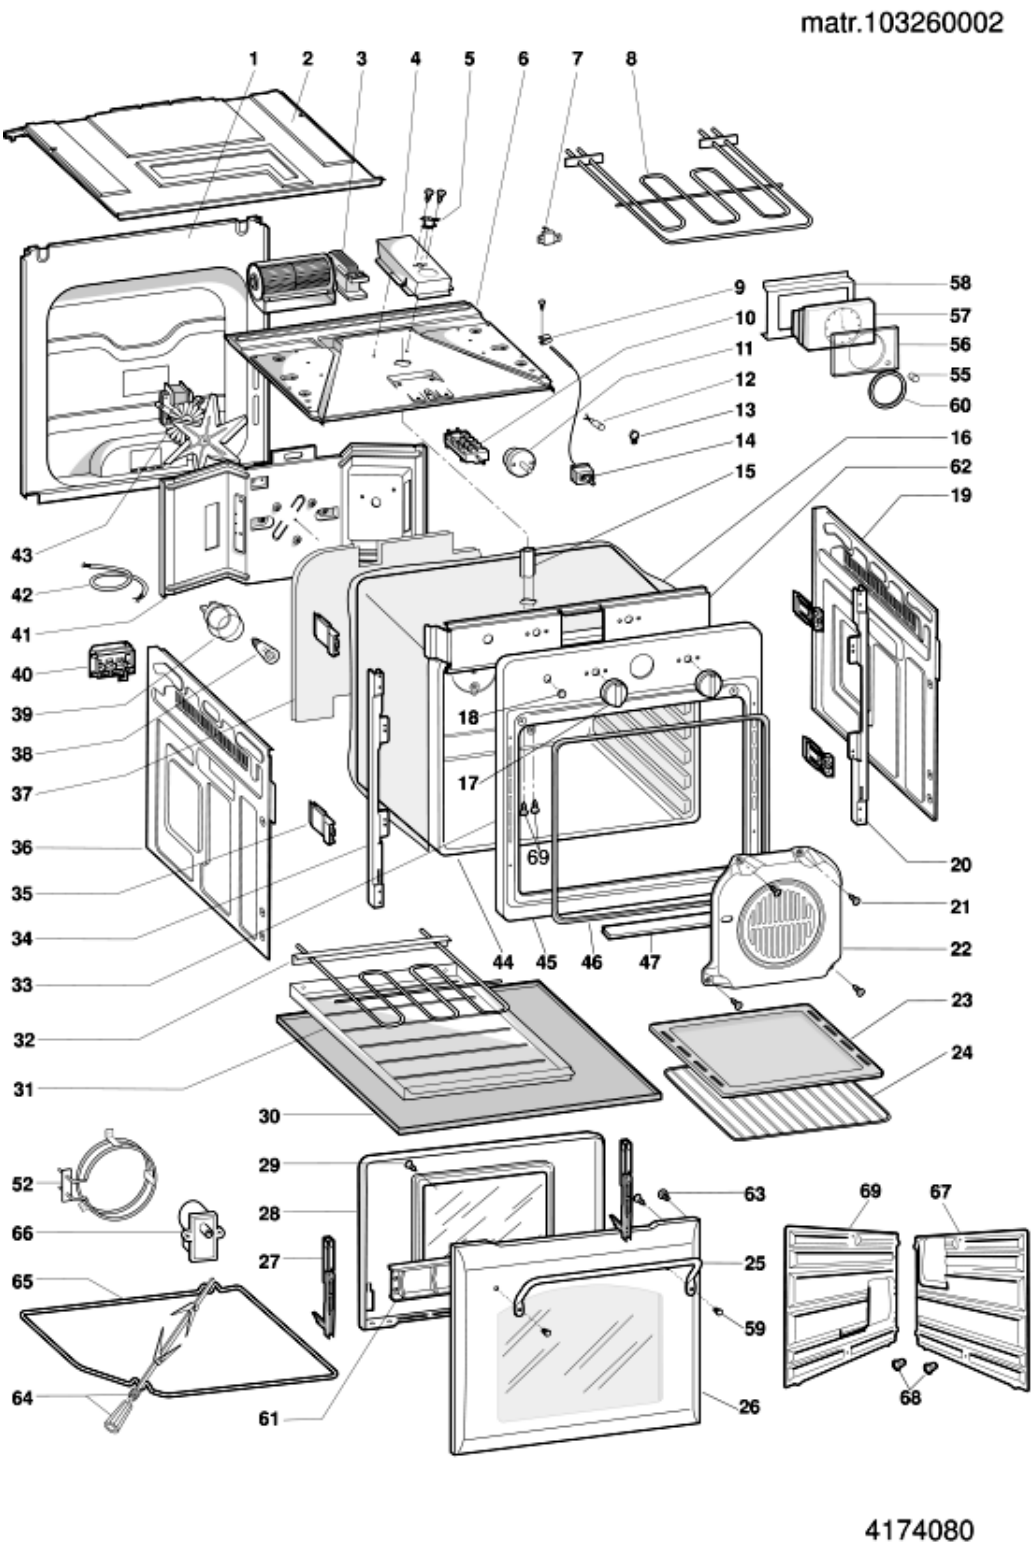

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

Notices

n1015052: INTRODUCTION OF NEW COPPER FINISH ON FT85 "TRADIZIONE" OVENS (RA)

From serial no. 31013.5330, a new copper finish for the front panel and the oven door+glass assembly has been introduced on models FT85(RA) (commercial code 25529) and FT85.1(RA) (commercial code 29043), to improve possible colour alterations occurring over time.
The parts with the new finish, which have new Sat codes, are not aesthetically interchangeable with premodification parts. The relevant codes are:
-084888 premodification finish front panel
-084874 oven door+glass Ariston old logo premodification finish
-094540 oven door+glass Ariston new logo premodification finish
-097997 front panel with new finish
-097998 oven door+glass Ariston new logo new finish
Premodification copper finish parts are out of stock and no longer managed by the replacements warehouse. NB: when replacing a door or front panel on a product before serial no. 31013.5330, both parts (i.e. door 097998 and front panel 097997) must be ordered, to remedy aesthetic differences between the old and new finish.
