INDESIT company

Model type:
FZ97P.1(AN)

Commercial code:
F031577

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

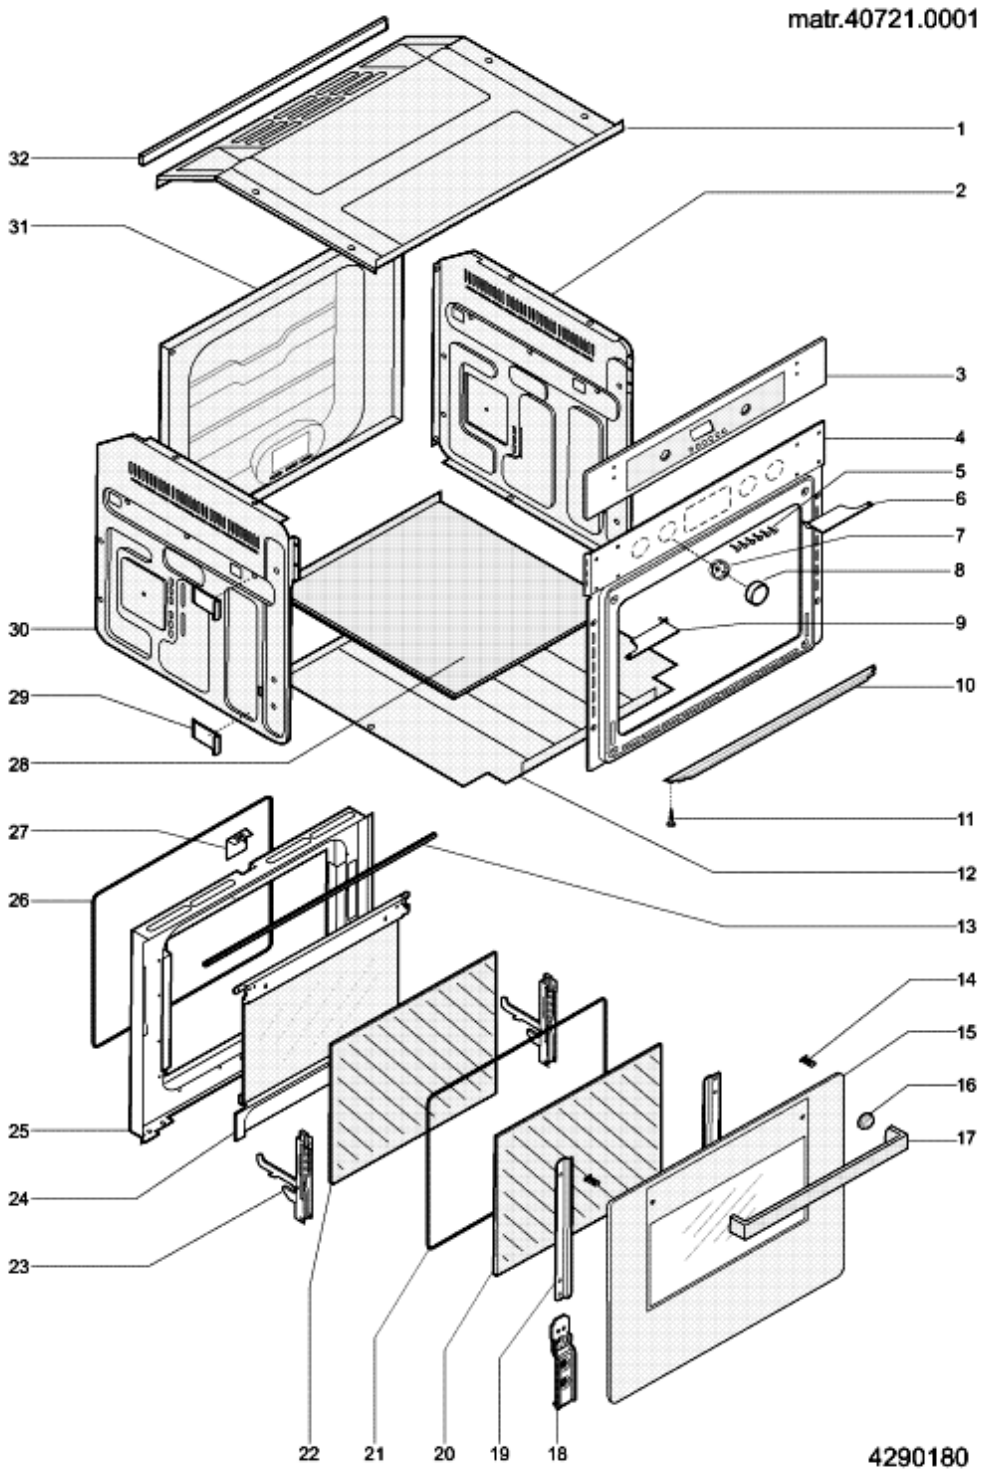

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

Notices

n1015101: INTRODUCTION OF WELDED FORCED DUCT ASSEMBLY

From serial no. 50411.0001, the welded forced duct assembly code 119058 has been introduced in place of screwed parts:
top duct = 098841
bottom duct = 114006 (ex 098842)

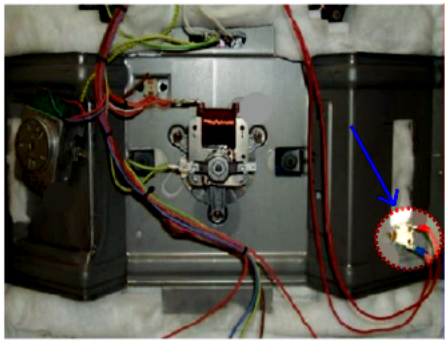

Therefore:
a) on appliances with serial number prior to 50411.0001 use
098841 = top duct
114006 = bottom duct

b) on appliances with serial number subsequent to 50411.0001 use:
119058 = welded forced duct assembly

n1507f04: Changing main PCB on Hot 2003

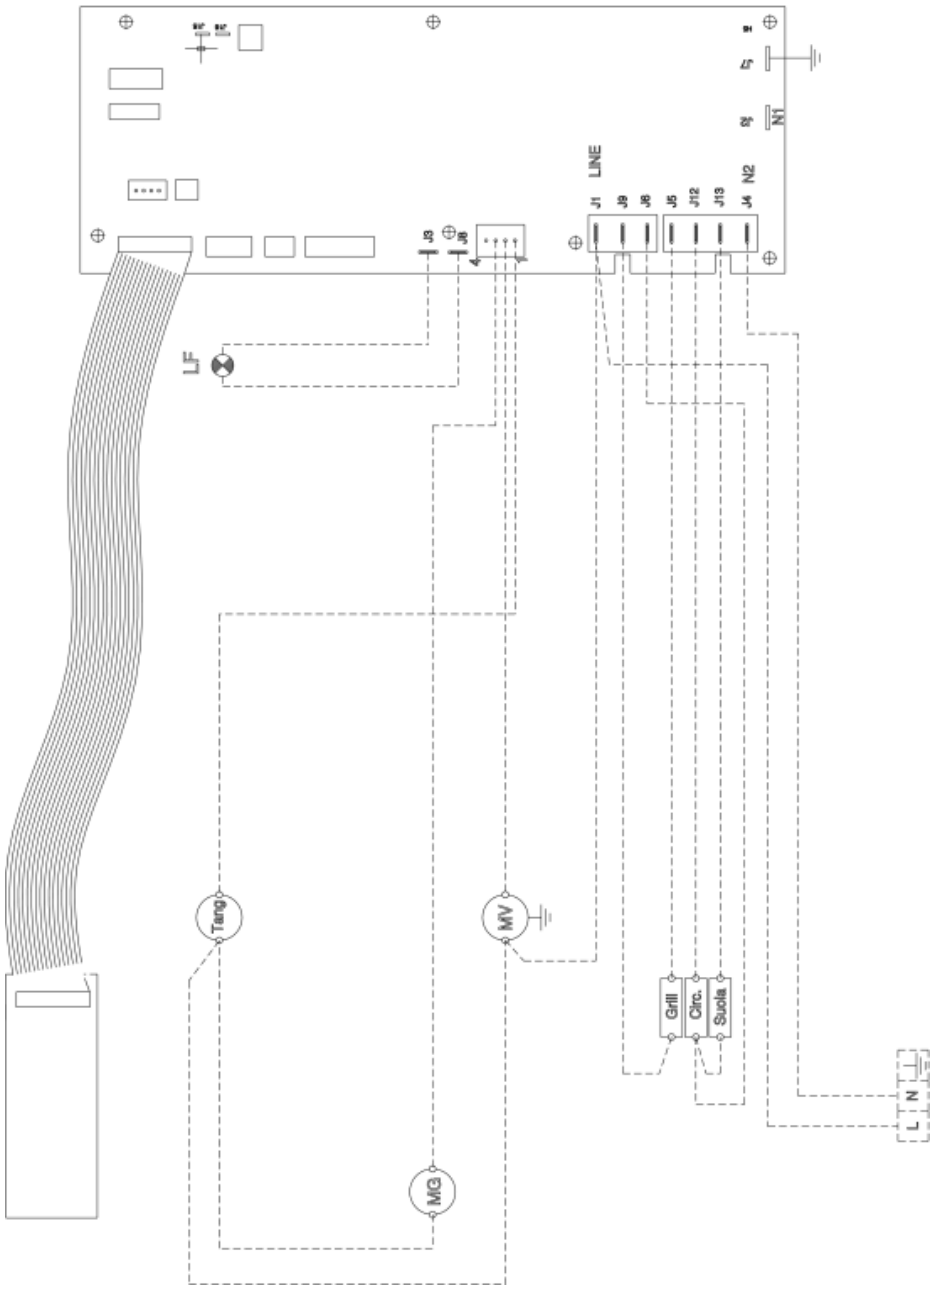

Important! On products with serial number prior to 50329….. (before 29 March 2005) when changing the main PCB, it is of paramount importance that you fit ALL the following parts and disconnect the 95°C thermostat shown in the enclosed illustration from the oven.

C00143141 = MAIN PCB
C00114564 = DOOR LOCK
EEPROM (see product)
