INDESIT company

Model type:

BCS313AVEI
BCS313AVEIS

Commercial code:

F027595
F027596
F029149
F029150

ARISTON INDESIT Scholtès

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

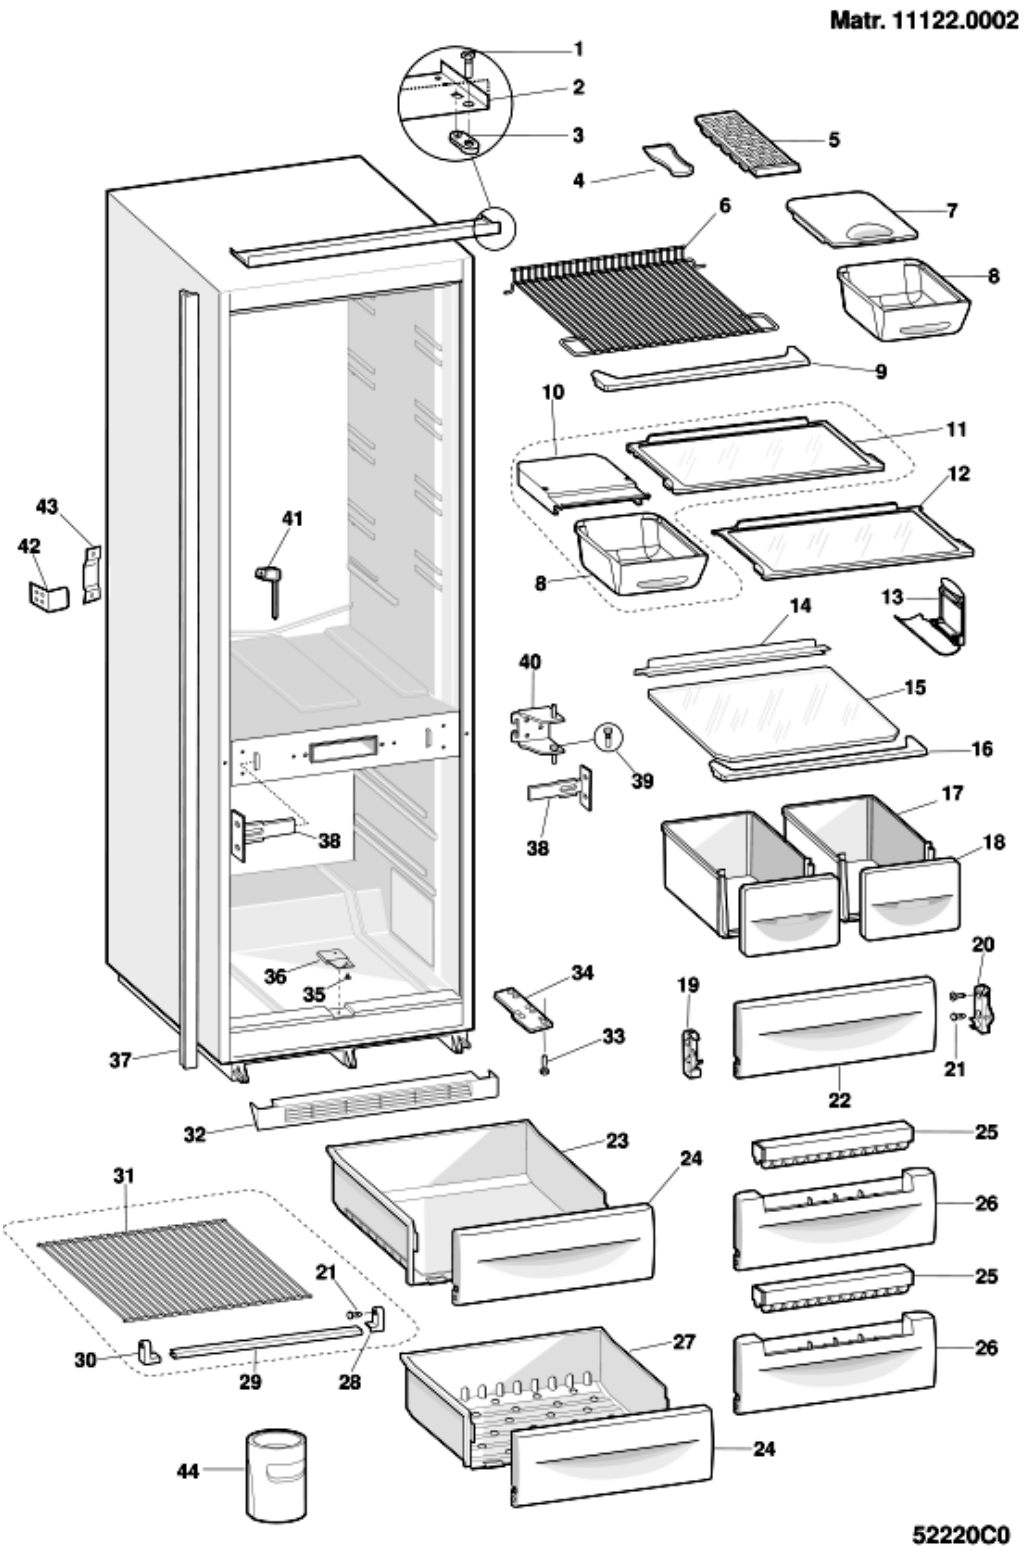

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

0522067: SEALS FOR DOORS FOAMED AS ONE PIECE

Various types of gaskets with different profile, as shown in figures (A) and (B), are used to fix the door (fig. A-5; B-5) and the inner door (fig. A-6; B-6) on the block foamed doors of combined freezers and refrigerators.
---Ilpea profile 245; 179; 412 (fig.A)
---Ilpea profile 287 (fig.B)
When replacing gaskets with profiles 245; 179; 412 these are fixed with screws (2 per corner) to the door.
Gaskets with profile 287 can not be used as spare parts but are designed to house the Ilpea type 900 gaskets (see figure C).
When replacing the gasket (287), once it is removed you will find a pocket (fig. B-1) between the door and inner door.
The rigid tooth (fig.C-1) of the gasket (900) is inserted inside between the pocket and the inner door, doing away with the need for screws.
Gasket with profile 287 is easy to identify since it has an exterior double edge (fig.B-2) which acts as a cushion when the door is closed.
To replace this gasket, follow these steps:
---Dismount the door and cut the four corners of the gasket along the joint (fig.D);
---lift the gasket and pull it carefully along its full length without tearing it (fig.E).
The purpose here is to detach the inner door slightly from the foam along the exterior edge for a depth equal to that of the gasket (fig.B-3);
---lift the corner of the inner door slightly, prising it up with your thumb (fig.F). Do not use a tool which might break the inner door;
---continue cutting the gasket inside the inner door for about 6 mm (fig.G);
---push in the tip of the pliers (type USAG N131) and pull outwards until you see the top edge of the pocket (fig. B-4) which is empty (fig.H-1);
---if you carry out this operation correctly (fig.L) you will be able to pull off the top edge of the pocket for the full length of the door.
If the gasket tears before the top edge (fig. L-2) you should repeat this operation from the other corner of the door.
---once the gasket (287), has been removed the space above the pocket (fig. L-1) can house the rigid tooth (fig. C-1) of the gasket 900.
When you fit this gasket ensure that it lies flush against the edge for the full length of the door.
If the rigid tooth is difficult to fit, eliminate any residues of foam between the door and the inner door in the gasket area.
fig.5131549A

n1025120: Modification of door shelves on fitted f

Since May 2002, the Carinaro factory has modified the moulds of the inner doors and door shelves on the new fitted range

(STYLE - ECO-CLASS).
The shelf attachment has been modified (angle from 15 to 6 degrees) on the fridge inner door and the light switch-off area improved.
The new refrigerator doors with 6-degree attachment are interchangeable with the previous versions but not vice versa, therefore, the door stocks in the main replacement parts warehouse will be cleared. The new items will be managed with the same code as the previous ones.
The base of the inner door shelves has been modified for the 6-degree attachment, whereas the profiles and flip-up lids have been modified to improve the connection to the base, and therefore also these are not interchangeable with the previous ones.
Stocks of the premodification door shelves will be maintained.

n1030020: Replacement of NTC sensors on latest generation of "cold product line" models

---

(KRF 310VE - KRF330VE - KRF310VNFE - KRF330VNFE), including the new combo appliances in the Indesit-2000 range (C238 e C240), Ariston-2001 (MBA3831-4031- 4231 ; MBA3841 - 4041) on static or no-frost "cold product line" models of the latest generation electronic version, the NTC sensors cannot be replaced because they are blocked within the cabinet. This decision is due to the low faultiness of the component and to the high guarantees of operation in foam-insulated environments.

The exceptions to the aforementioned are the upright Ariston electronic 600 mm wide freezers, rounded aesthetics, Ariston models EUP300XEU - EUP350XEU - TUP300XOM (including deriving versions) where the sensor can still be replaced in the event of a fault.
Where the replacement of the product is deemed necessary by the probe defect, then it is important to closely check that the problem is determined by the probe and not by the electronic card.
In order to check the correct operation of the probe it is possible to measure the resistance of the wiring harness terminals that must present the following values :

- temperature of + 20 °C = about 2.000 ohm (air probe at environment temperature)
- temperature of + 5 °C = about 7.000 ohm (fridge air probe)
- temperature of - 18 °C = about 23.000 ohm (freezer air probe)

Also, in a less technical manner, replacing each probe on the electronic card (at room temperature) in a "steering" manner, checking the elimination of the problem (if the compressor starts the probe is defective).

N.B. the probes are identifiable by their coloration (marking) placed on the probe and its wiring harness :

-fridge evaporator probe (black marking)
-fridge air probe (brown marking)
-freezer air probe (white marking)
-freezer evaporator probe (no-frost) end of defrost (light blue marking).

n1030057: New Bitron-510 solenoid valve on combined refrigerator-freezers (Melano-Carinaro

---

The Bitron-510 solenoid valve was already used in July 2001, for a short period of time, by the Melano production (see note N1030026). At that time, it was decided not to manage it as spare part in place of the Bitron/Elbi 368 item.
Now, seeing that it is being used in the Melano (November 2002) and Carinaro (March 2003) factories, it has been decided to

manage it as spare part, in place of Bitron/Elbi 368.
The Bitron-510 solenoid valve can also be fitted on premodification models using the KIT that includes the molecular filter.
The Bitron-510 solenoid valve used in the Melano factory is not interchangeable with the one used in the Carinaro factory because the tube bending is different.

For Melano, this modification affects Opera-60 Ariston combined refrigerator-freezers and the Indesit 2000-2002 range from serial no. 21111.0001; for Carinaro, it affects Ariston built-in combined refrigerator-freezers 2002 range, from serial no. 30323.000.

N.B. Please remember that the tube marked with adhesive tape is the one that must be connected to the capillary tube (marked with the varnish) of the refrigerator evaporator, whichever the type of solenoid valve used.

n1030061: Standardisation of fridge door (H=1024) KDF240 /KRF3100

In July 2003 (serial no. 30728.0001) the Carinaro factory standardised the fridge door, 1024 mm high, (KDF240/BD240), also on all KRF3100 fridge-freezers, Ariston BCS311(2002 range) and Indesit INC3100G models, maintaining the specific styling of the inner door (style-eco-class or Giugiaro).
Previously, these models had a 1026 mm high door.
To compensate the 2 mm height difference, the upper hinge pin has been lengthened and a small bush (6 mm long) has been added to those (4 mm long) already fitted on the product.

n1030064: Elimination of sensor cage on 2002 range built-in fridge-freezers models BCS313

In April 2003 (serial no. 30407.0001) the Carinaro factory eliminated the cage protecting the fridge air sensor and moved the sensor 5-6 cm back on Ariston built-in electronic fridge-freezers.

This structural modification has involved the use of new electronic cards with warmer setting, because the sensor is less sensitive in the new position than in the previous more forward position with cage.

The Magnetek cards 162000524… (4083/PINK) and 162000525… (4082/WHITE) currently in stock in the Fabriano spare parts warehouse have all been replaced in order to be aligned with that used by production to date. These cards have been highlighted (see photo) with the marker pen, while the Magnetek codes (not higher than 162000524.06 and 162000525.07) are shown on the plates.
They will be managed with the following new Sat codes to enable correct ordering with respect to the previous ones.

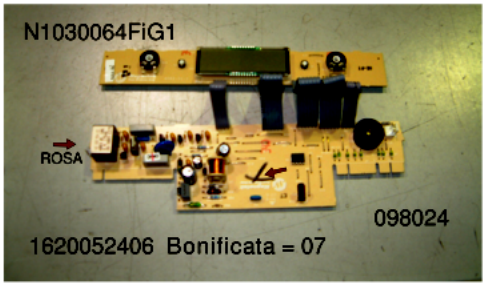

098024 - 4083/pink new = (143091 ROHS)
098025- 4082/white new = (143092 ROHS)

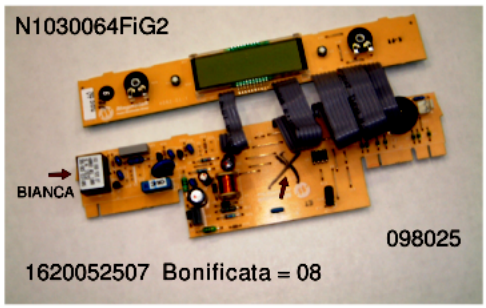

The previous cards, with colder settings, do not have any highlighted marks and continue to be managed with the same Sat code (089759 and 088529=143093 ROHS) and must only be used on models with fridge air sensor in forward position and complete with cage.
Also, card 16200084501 will be managed with code 088529=143093 ROHS (4082/GREEN), currently used on the self-supporting fridge-freezer, which has the same settings as the previous card 16200052507 (4082/WHITE); whereas a card with red stamp on the pink plate (see photo) will be managed with code 089759.

Since November, electronic cards, with warmer settings, give the code 16200052407 for 4083/PINK and 16200052508 for 4082/WHITE on the plate, and must only be used on models with fridge air sensor without cage and in the back position.

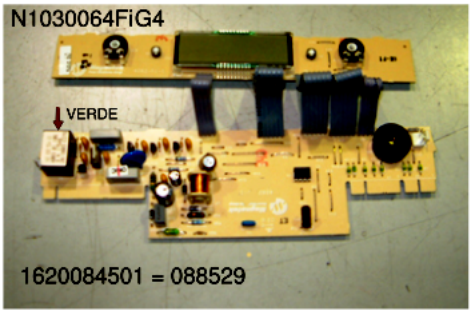

.
New parts
098024 = (143091 ROHS) CARD (MAGNETEK 4083/PINK) new (no-frost models without cage)
098025 = (143092 ROHS) CARD (MAGNETEK 4082/WHITE) new (static models without cage)

Parts replaced

n1030072: New 220-240V /50-60 Hz fan unit C09R1907 (KIT 077159 and 081971) Carinaro

---

At the end of March 2004 the Carinaro factory replaced the fan unit in kit 077159.

The new fan unit (C09R1907) differs from the previous one (C09R1846) in the rpm reduction from 2290 to 2000, 3.5 Watt power, Class B, 220-240V/50-60 Hz voltage and faston connectors (6.3x0.8 mm) remain the same.
This modification will also be extended to the Melano and Setubal factories for Kit 081971.
The new fan unit will be managed with the same Service code as the previous one (076024), once the stocks of the latter run out; the same will also be done for Kits 077159 and 081971.

n1030078: Replacement of light button (032387) on Ariston and Indesit built-in combined fr

---

In April 2004 (serial no. 40406.0001), the Carinaro factory replaced the light button (ARCOLECTRIC) on Ariston and Indesit built-in combined fridge-freezers of the 2000 range.
The new light button (DEKA) cannot be fitted on premodification models, as the two buttons do not have the same dimensions and therefore are not interchangeable.

New parts

092774 - LIGHT BUTTON 250V (NC) DEKA

Parts replaced

032387 - LIGHT BUTTON 250V (NC) ARCOLECTRIC

n1030084: New sliding blocks for fixing the furniture door to the refrigerator door

---

Since October 2004, the Carinaro factory has been using new sliding blocks for fixing the furniture door to the refrigerator door.
The new items are fixed to the side of the refrigerator door, whereas the previous ones were fixed to the front.
The doors are no longer provided with sixteen 2.6 mm holes on the front for fixing the old slides.
The new sliding blocks can also be fitted on premodification models. Proceed as shown in the attached figure (N1030084fig.1).
When replacing the sliding blocks on premodification models it will necessary to replace both guides.
This modification has involved changing the installation KITS

NB - Door spare part codes have not been changed.

n1030100: New fixing bracket for combined 310-330 litre built-in models (Carinaro)

Since January 2006 (s/n 60123.0001) the fixing bracket, fitted on the cabinet, has been modified to strengthen the top hinge pin area.
The modification consists of having replaced the plastic bush with a threaded metal bushing (12x15) welded to the fixing bracket.
The new fixing bracket can also be fitted on premodification models.

n2511b03: COLOR CHANGE BUTTER BOX AND COVER

Only transparent will be managed

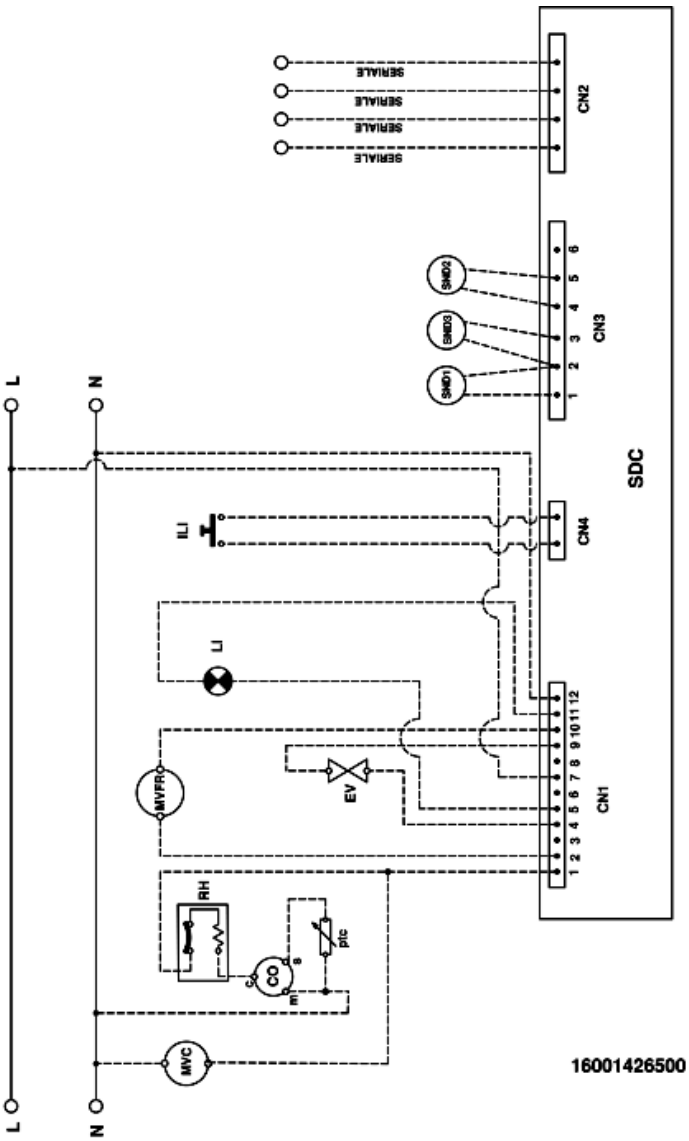

n3010j01: Colour Change of Internal Accessories

The colour of some of the internal shelves and accessories have changed to transparent. This affects models produced in Carinaro-Manisa. Modification is functionally interchangeable therefore once the colour versions of the parts have depleted they will automatically substitute to its corresponding transparent parts. Some parts will have been made obsolete with no substitution.

Some parts have changed from Satin Finish to Shiny (Crystal) Finish. These parts include;
-Door Shelves
-Crisper Front Panels
-Freezer Drawer Front Panels
All pre-modification components will be managed till the end of stock and after they will be substituted with new version.
