General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

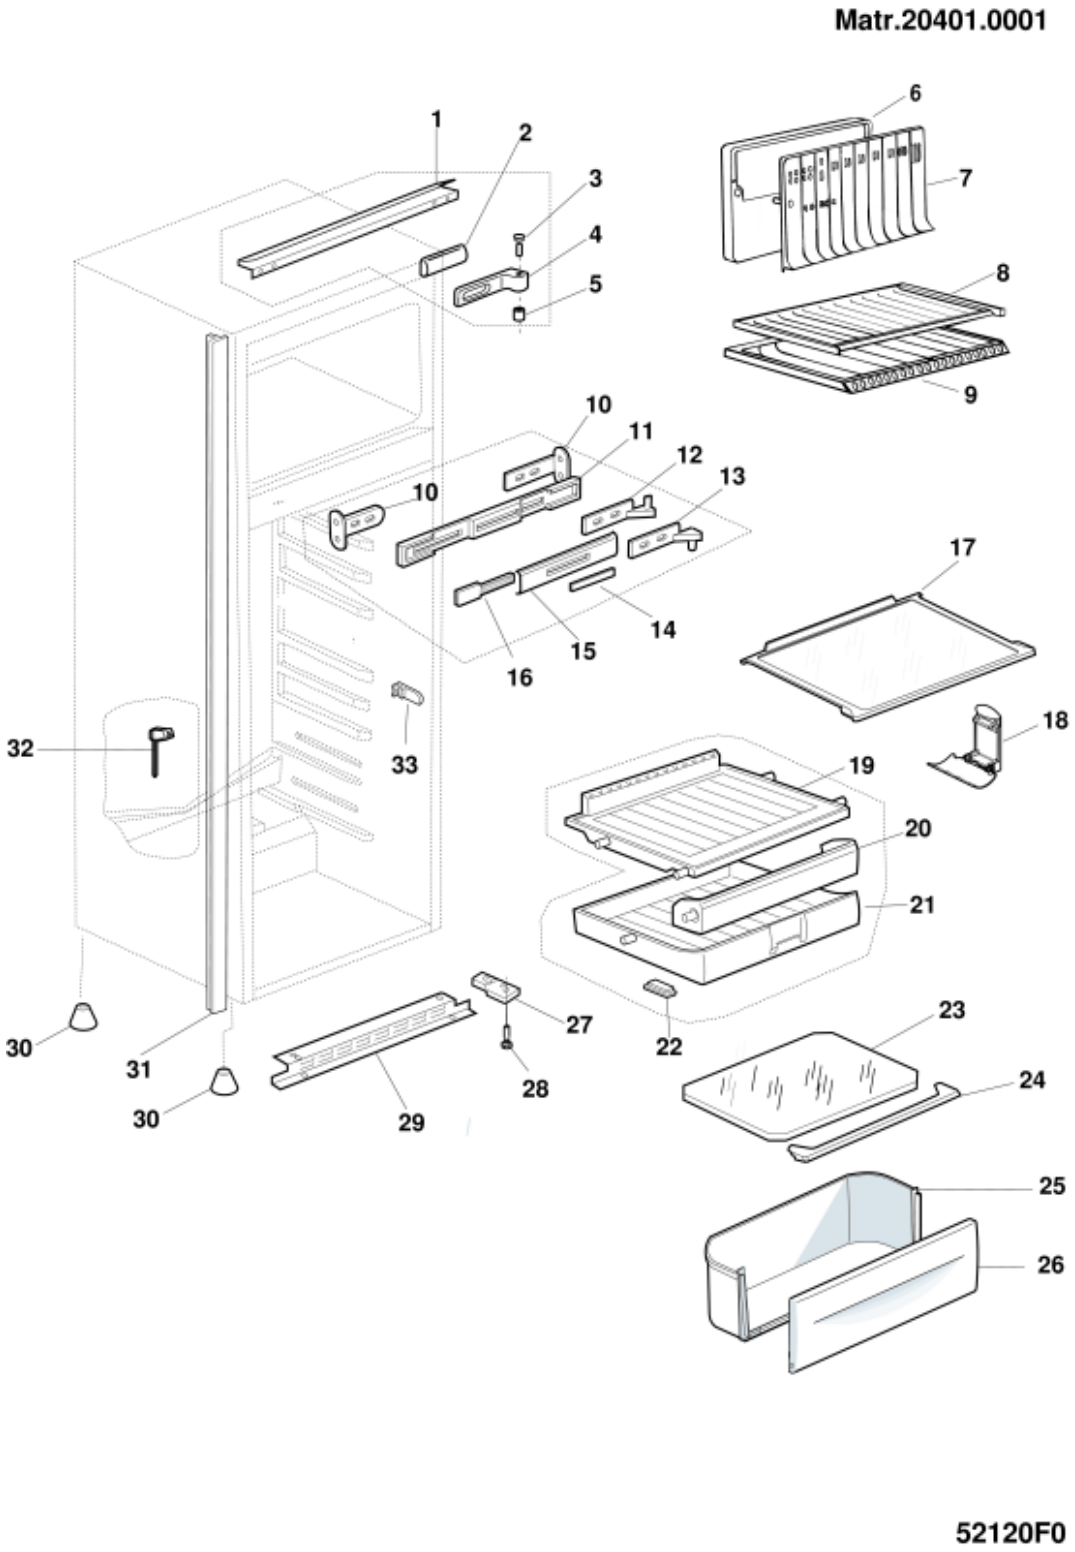

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

0521100: 20W HEATING ELEMENT FOR DRIP CHANNEL FOAMED TO CABINET

As from serial no. 001110001 the 20W wire heating element on all the 2 and 3 door models of the Nofrost series, including the recessed model, is mounted under the drip tray of the freezer compartment and foamed together with the cabinet.
In the case of heating element failure, use the previous version with the heating element of the drip tray mounted outside (see Service Manual chapter 3.7).

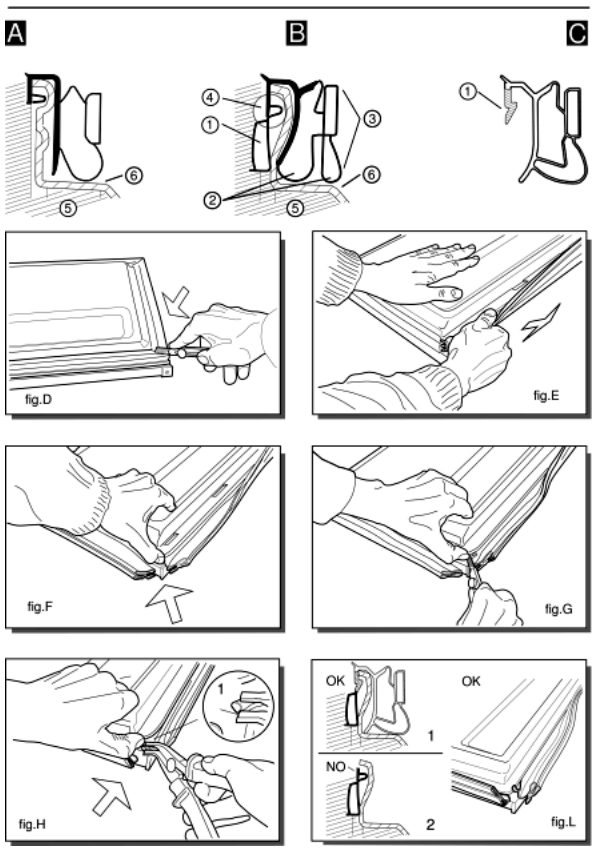

0521111: WIDE-BAND 20W HEATING ELEMENT FOR DRIP CHANNEL

As from October 1991, the codes 028085 (molex attachments) and
025210 (faston attachments) refer to the 20 W drip tray with large band which replaces the previous type with narrow band.
In the version with wide band, the sizes of the aluminate sheet are as follows: width 470 mm and depth 130 mm.
This new heating element has major hold and heats a wider area as well as the drip tray.
To ensure that the heating element is positioned correctly, remember that the drain hole of the drip tray must coincide with the slotted part of the aluminate sheet (leaving the cables on the left).
Before removing the protection film from the adhesive tape, shape the aluminate sheet according to the shape of the drip tray.
After having removed the protection film from the adhesive tape and before positioning the aluminate sheet, ensure that the two edges overlap in order to avoid large folds at the ends when these are fixed.
Fit the aluminate sheet, keeping it towards the top and start gluing from the drain hole following along the edge of the heating element (press down firmly with your hands in order to prevent air bubbles from forming).
Complete the gluing procedure with a cloth to prevent the formation of large folds at the two ends.
Once the parts have been fixed, carefully fold one of the two edges of the cut into the drain hole using a medium cross-head screw driver.
Do not damage the wire of the heating element.
Important: after having removed the heating element you are replacing, remember to dry and clean the surface of the drip tray thoroughly.

0521123: SEALS FOR DOORS FOAMED AS ONE PIECE

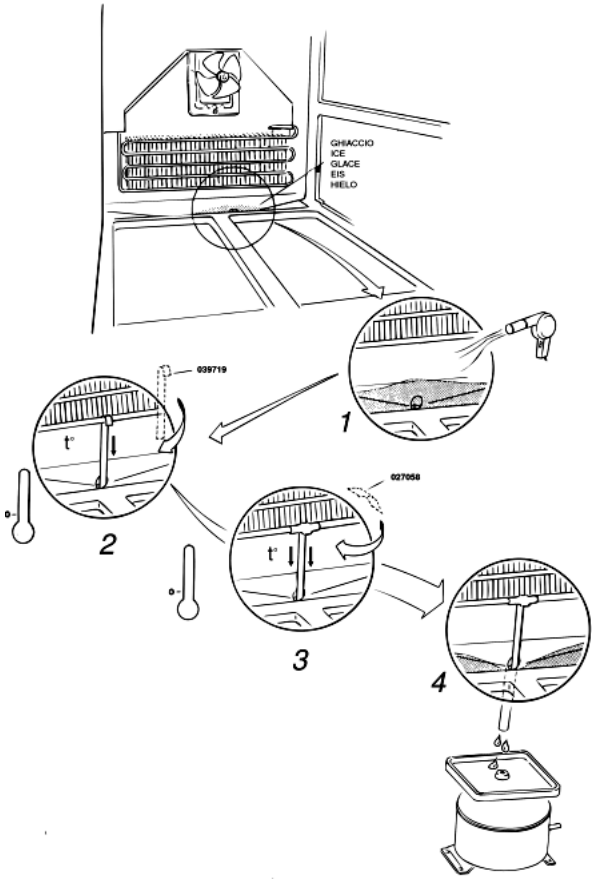

Various types of gaskets with different profile, as shown in figures (A) and (B), are used to fix the door (fig. A-5; B-5) and the

inner door (fig. A-6; B-6) on the block foamed doors of combined freezers and refrigerators.
---Ilpea profile 245; 179; 412 (fig.A)
---Ilpea profile 287 (fig.B)
When replacing gaskets with profiles 245; 179; 412 these are fixed with screws (2 per corner) to the door.
Gaskets with profile 287 can not be used as spare parts but are designed to house the Ilpea type 900 gaskets (see figure C).
When replacing the gasket (287), once it is removed you will find a pocket (fig. B-1) between the door and inner door.
The rigid tooth (fig.C-1) of the gasket (900) is inserted inside between the pocket and the inner door, doing away with the need for screws.
Gasket with profile 287 is easy to identify since it has an exterior double edge (fig.B-2) which acts as a cushion when the door is closed.
To replace this gasket, follow these steps:
---Dismount the door and cut the four corners of the gasket along the joint (fig.D);
---lift the gasket and pull it carefully along its full length without tearing it (fig.E).
The purpose here is to detach the inner door slightly from the foam along the exterior edge for a depth equal to that of the gasket (fig.B-3);
---lift the corner of the inner door slightly, prising it up with your thumb (fig.F). Do not use a tool which might break the inner door;
---continue cutting the gasket inside the inner door for about 6 mm (fig.G);
---push in the tip of the pliers (type USAG N131) and pull outwards until you see the top edge of the pocket (fig. B-4) which is empty (fig.H-1);
---if you carry out this operation correctly (fig.L) you will be able to pull off the top edge of the pocket for the full length of the door.
If the gasket tears before the top edge (fig. L-2) you should repeat this operation from the other corner of the door.
---once the gasket (287), has been removed the space above the pocket (fig. L-1) can house the rigid tooth (fig. C-1) of the gasket 900.
When you fit this gasket ensure that it lies flush against the edge for the full length of the door.
If the rigid tooth is difficult to fit, eliminate any residues of foam between the door and the inner door in the gasket area.
fig.5131549A

0521124: CLOGGING OF DRAIN HOLE ON NO-FROST FRIDGE

When on no-frost refrigerators at the end of a freezer defrost the ice clogs the drain hole or ducting, do as follows:
--- Check that the 20-W drip heating element is well glued and operative, otherwise replace it.
--- With a hair-dryer remove ice residue and check that the water flows down through the drain hole and to the compressor tray.
--- Insert the aluminium rod (039719) in the hole, the bent end resting on the lowest element of the armoured heating element (60-72 W) mounted on the freezer evaporator.
If the height of the evaporator is less than 9 cm compared to the drip hole, shorten the rod about 3 cm.
To improve distribution of heat inside the drain hole, block the rod on the armoured heating element with a piece of aluminium tape (027058).
The aluminium rod, code (039719), will be equipped with a drawing to explain assembly.

n1025120: Modification of door shelves on fitted f

Since May 2002, the Carinaro factory has modified the moulds of the inner doors and door shelves on the new fitted range (STYLE - ECO-CLASS).
The shelf attachment has been modified (angle from 15 to 6 degrees) on the fridge inner door and the light switch-off area improved.
The new refrigerator doors with 6-degree attachment are interchangeable with the previous versions but not vice versa, therefore,

the door stocks in the main replacement parts warehouse will be cleared. The new items will be managed with the same code as the previous ones.
The base of the inner door shelves has been modified for the 6-degree attachment, whereas the profiles and flip-up lids have been modified to improve the connection to the base, and therefore also these are not interchangeable with the previous ones.
Stocks of the premodification door shelves will be maintained.

n1025160: Elimination of screen printing on crisper front

From serial no. 60515.0001(May-2006) the front screen printing has been eliminated from the crispers of 55 cm wide refrigerators produced in Carinaro.
With this modification, in order to simplify crisper replacement, the parts introduced will be managed complete instead of with separate crisper and front panel.

n1030084: New sliding blocks for fixing the furniture door to the refrigerator door

---

Since October 2004, the Carinaro factory has been using new sliding blocks for fixing the furniture door to the refrigerator door.
The new items are fixed to the side of the refrigerator door, whereas the previous ones were fixed to the front.
The doors are no longer provided with sixteen 2.6 mm holes on the front for fixing the old slides.
The new sliding blocks can also be fitted on premodification models. Proceed as shown in the attached figure (N1030084fig.1).
When replacing the sliding blocks on premodification models it will necessary to replace both guides.
This modification has involved changing the installation KITS

NB - Door spare part codes have not been changed.

N130084FIG1

n2511b03: COLOR CHANGE BUTTER BOX AND COVER

Only transparent will be managed

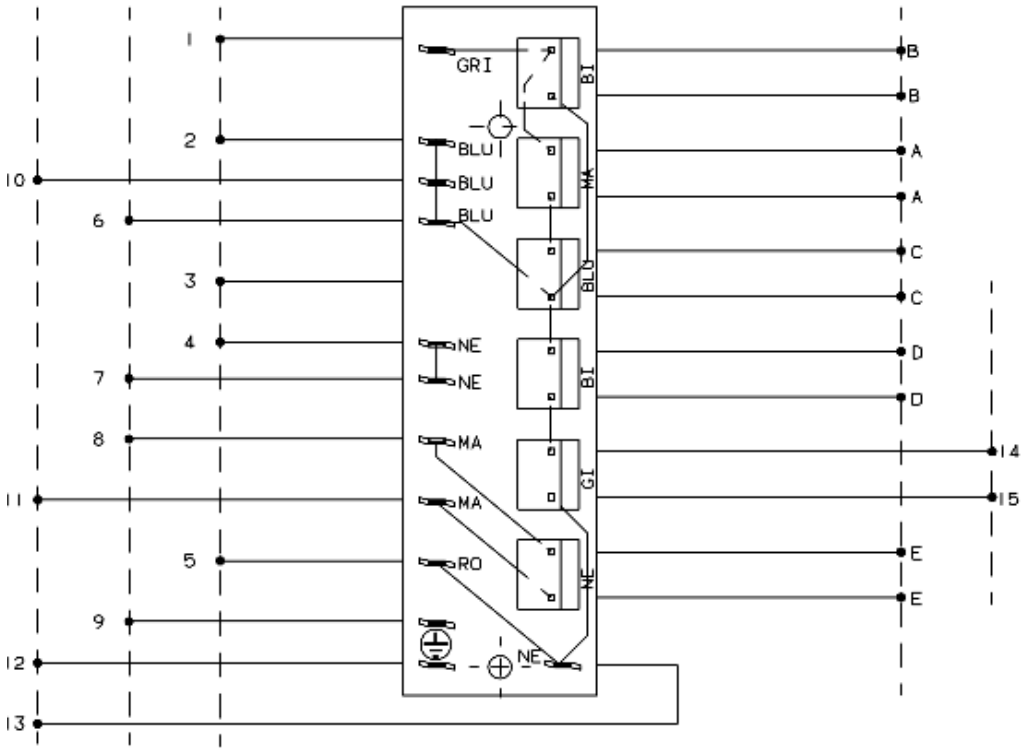

n3010j01: Colour Change of Internal Accessories

The colour of some of the internal shelves and accessories have changed to transparent. This affects models produced in Carinaro-Manisa. Modification is functionally interchangeable therefore once the colour versions of the parts have depleted they will automatically substitute to its corresponding transparent parts. Some parts will have been made obsolete with no substitution.

Some parts have changed from Satin Finish to Shiny (Crystal) Finish. These parts include;
-Door Shelves
-Crisper Front Panels
-Freezer Drawer Front Panels
All pre-modification components will be managed till the end of stock and after they will be substituted with new version.
