INDESIT company

Model type:
TD740TCES(AZ)

Commercial code:
F028049

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

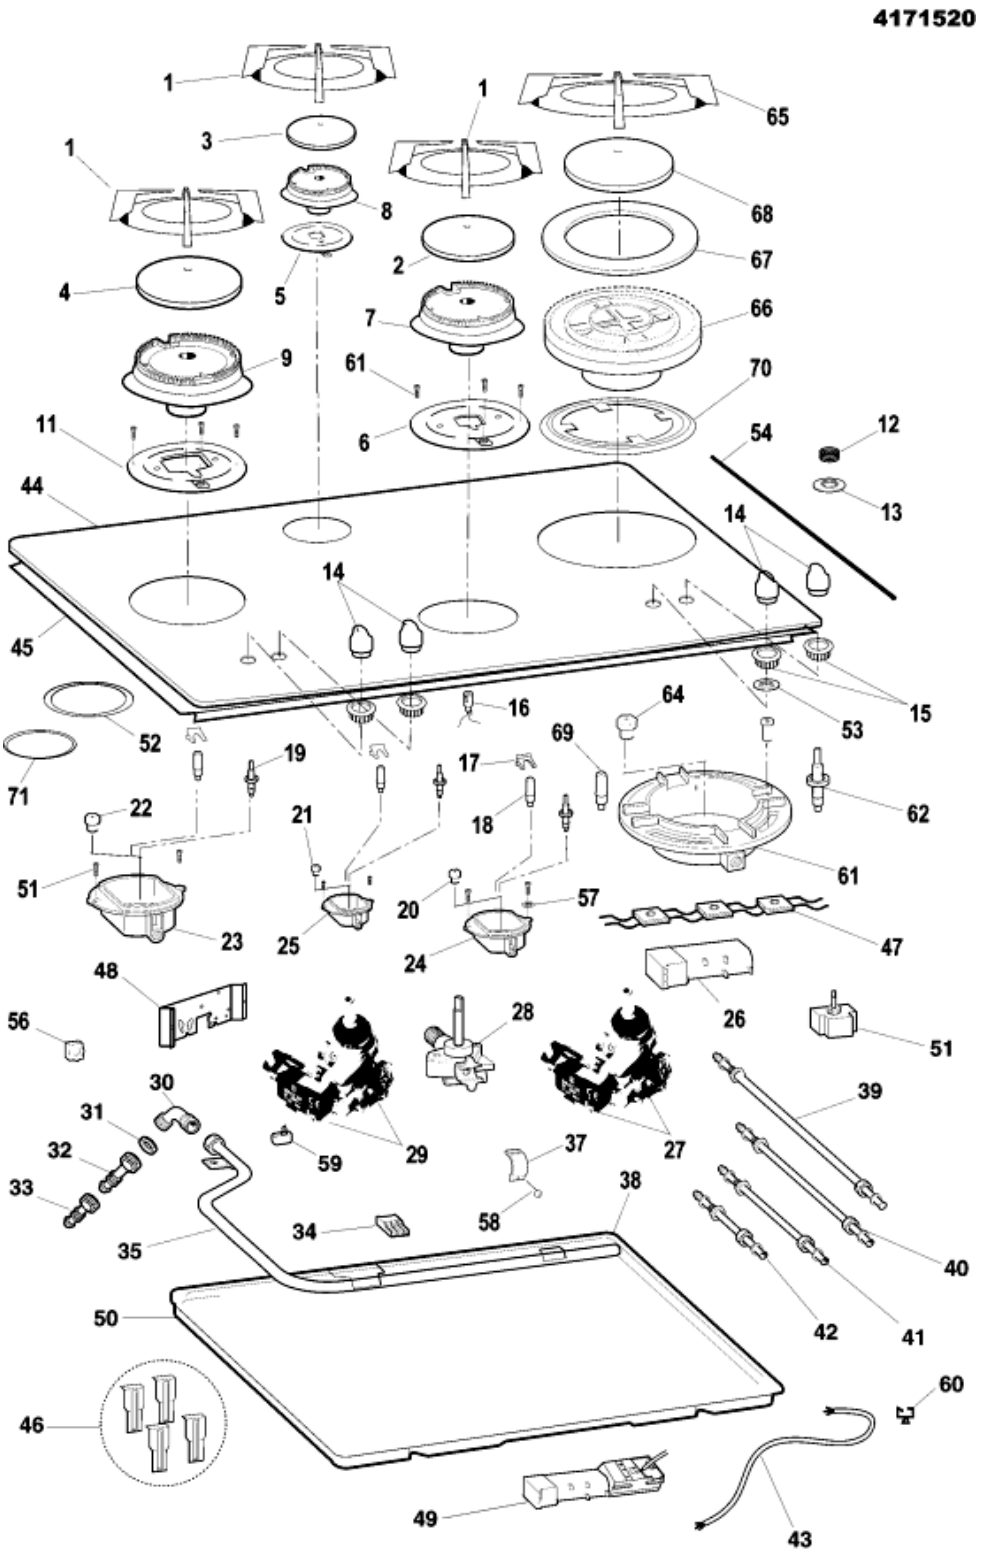

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

n1015048: MODIFICATION OF CUP SUPPORT RUBBER GASKET ON GLASS COOKTOPS

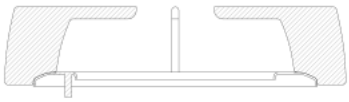

From serial number 30430.0001, for production requirements, all models affected by this modification have been equipped with new cup support gaskets. The new parts, which have new SAT codes, are not individually interchangeable with premodification items; therefore, when the latter run out and a gasket needs replacing on appliances with serial numbers prior to 30430.0001, new gaskets must be ordered for all burners present on the appliance. The premodification and new gasket codes are given below.
Premodification gasket - aux./semirap./rapid D158.4 = 074602
New gasket - aux./semirap./rapid D153.4 = 096132
Premodification gasket - triple crown D205.4 = 074603
New gasket - triple crown D199.8 = 096133

n1015056: ADDITION OF SECOND CENTERING PIN ON 60-70 GLASS COOKTOP GRILLES

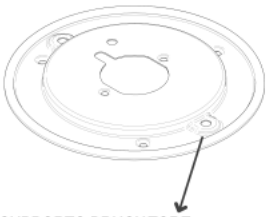

As of week 3, 2004, all products affected by this modification have been equipped with new cooktop grilles. Another centering pin (located opposite the first) has been introduced to improve grille stability on the cooktop. Following this modification, also all burner supports used together with the above grilles have been equipped with a second hole for the centering pin.
The modified grilles and burner supports have new Service codes.
The new grilles (those with 2 centering pins) must be used with the relevant new burner supports (with 2 holes for the centering pins) which, however, can also be used with premodification grilles (with only one centering pin).
Premodification items will be available from the spare parts warehouse while stocks last.
Pre- and post-modification grilles and burner supports are shown below, together with a table giving the codes affected by the modification with matching items.

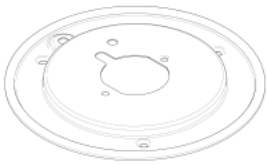

NUOVA GRIGLIA
(AGGIUNTO SECONDO PERNO DI CENTRAGGIO)

n1015062: MODIFICATION OF TAP ROD ON DIAMOND HOB KNOB

From serial no. 40630.0001, the gas burner knobs have been modified on built-in hobs TD6, TD7, GD6, GD7, TO7 produced in the Albacine factory, in order to improve gas ignition. This modification has involved reducing the length of the tap rod housing and knob spring housing by 1 millimetre, from 19.6 and 13.5mm to 18.6 and 12.5mm respectively.
The modified knobs, which have new SAT codes, are not interchangeable with premodification items. The latter will be available from the spare parts warehouse while stocks last, after which, when a premodification knob needs replacing, it will be necessary to replace all the knobs of the hob.
Given below are the codes of the premodification knobs and new knobs, in the various colours:
-090614 = ALU premodification
-111557 = ALU new
-085429 = INOX premodification
-111558 = INOX new
-090636 = NERA premodification
-111560 = NERA new
