

Model type:
k3400gw/ex

Commercial code:
F027100

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

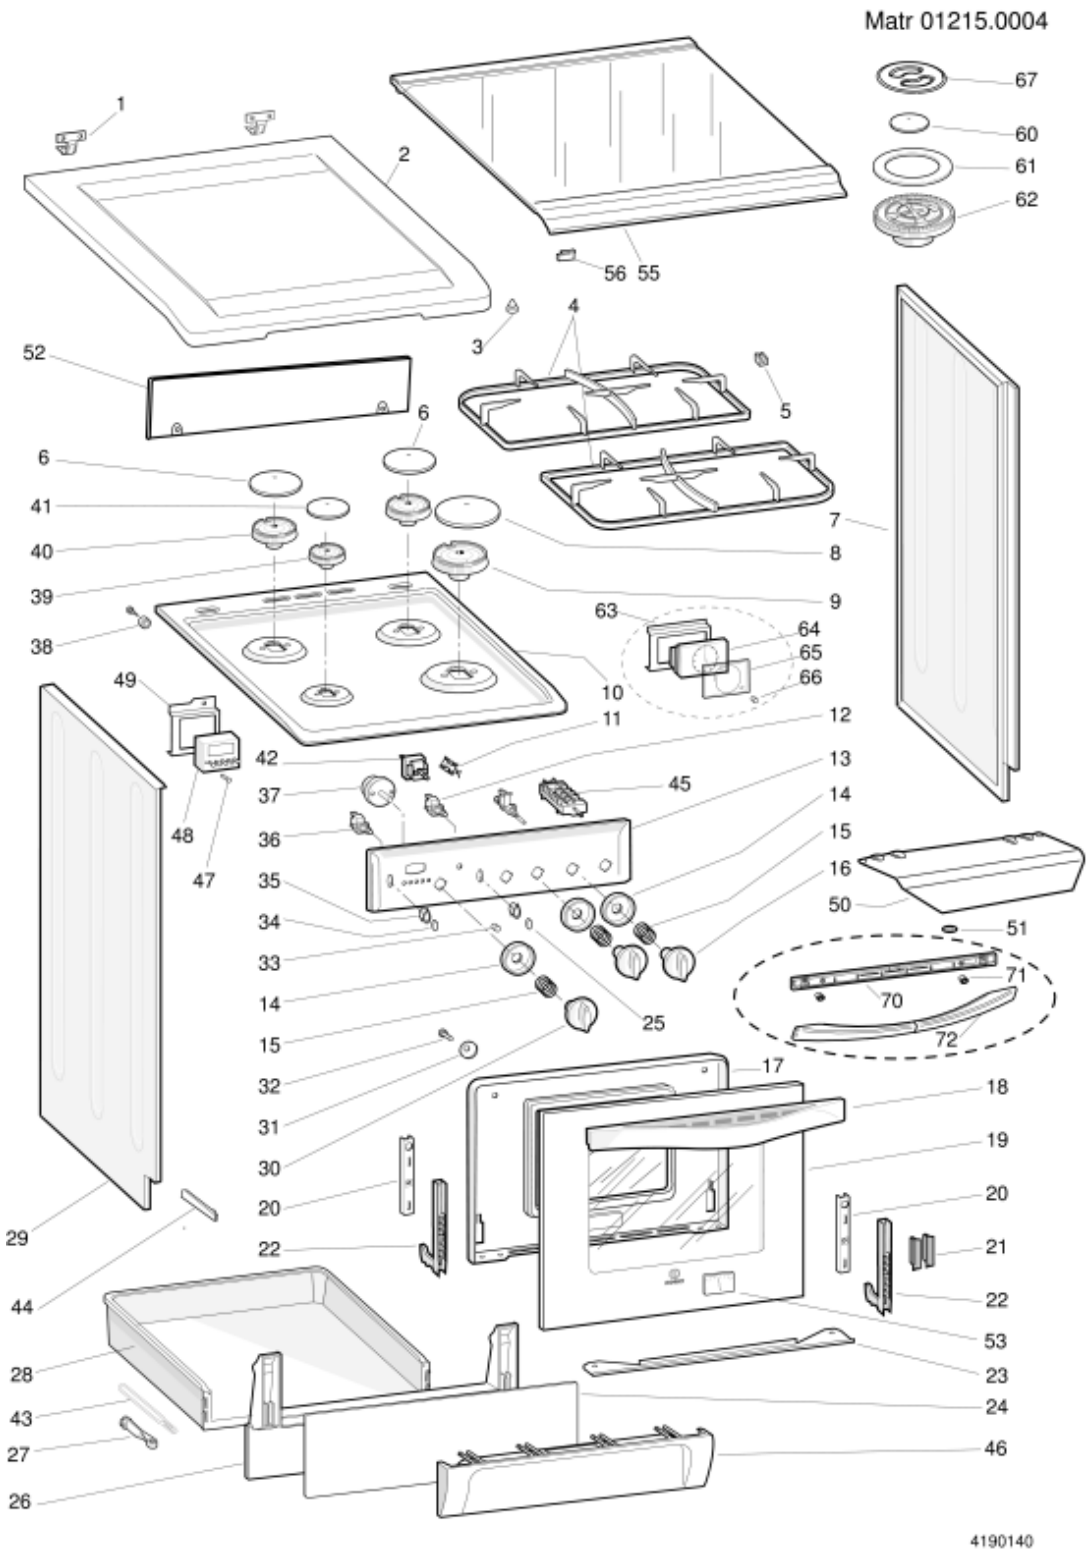

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

Notices

N1015026: KNOB DISC COLOUR UPDATE

From serial number 20411.0001 all free standing cookers produced in the Lodz and Albacina factories and affected by this modification have been equipped with new knob discs:
-code 088580 replaces code 064096 (dark grey)
-code 088531 replaces code 064122 (light grey)
-code 088422 replaces code 075249 (brown)
The new discs are functionally interchangeable with the pre-modification ones, but of a slightly different colour. In the event one or more discs must be replaced, it is recommended all discs be replaced with the new ones.
Pre-modification discs will be available from the spare parts warehouse while stocks last.

N1015033: GAS VALVES and THERMOSTAT FIXING PIECES

Here are reported SABAF and COPRECI gas valves and thermostats fixing pieces (brackets and screws).
All SABAF gas valves and thermostats need following code:
- 031028 FIXING SADDLE - GAS TAP
- 031027 BOLT M4

COPRECI ones (except for 2-way gas valves 051955 and 044984) need:
- 088881 FIXING SADDLE - GAS TAP
- 090205 BOLT M5X15

2-way COPRECI gas valves 051955 (w/o security system) and 044984 (w/ security system) use 2-holes bracket 090469.

n1015020: SABAF FAUCET MANAGEMENT / COPRECI

On the machines concerned with the current notice, SABAF and COPRECI faucets are assembled indifferently.
In the assistance phase, it is advisable to proceed as follows:

- where SABAF faucets appear, reassemble the SABAF
- where COPRECI faucets appear, reassemble the COPRECI

Nonetheless, the two typologies result interchangeable, giving careful attention to the linking phase of the same faucet with its relative supply tube.

It is instead imperative to reassemble the same typology of faucets that are found in the assisted machine when the latter needs to be switched on by hand.

n1015042: INTRODUCTION OF HIGHER DISCS AND MODIFICATION OF RELATED KNOBS

The knob discs (in all colours) have been made 2 mm higher for all 60x60, 50x60 and 50x50 cookers produced in the Albacina and Lodz factories. Also the related knobs have been modified (the threaded pin has been made 2 mm longer). The new discs and knobs, which have new spare part codes, are not interchangeable with premodification items; this means that the new discs must be assembled with the new knobs, and the premodification disc must be assembled with its related knob. Premodification items will be available from the spare parts warehouse while stocks last, after which, when a premodification disc or knob needs replacing, it will be necessary to replace all the discs and knobs of the hob to avoid aesthetic problems.

The table that follows indicates:

-premodification disc code and corresponding new code

-premodification knob code and corresponding new code

-validity date (serial number) for the new item in each factory
