INDESIT company

Model type:

FM37V

Commercial code:

F005346
F005347
F005348

ARISTON INDESIT Scholtès

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

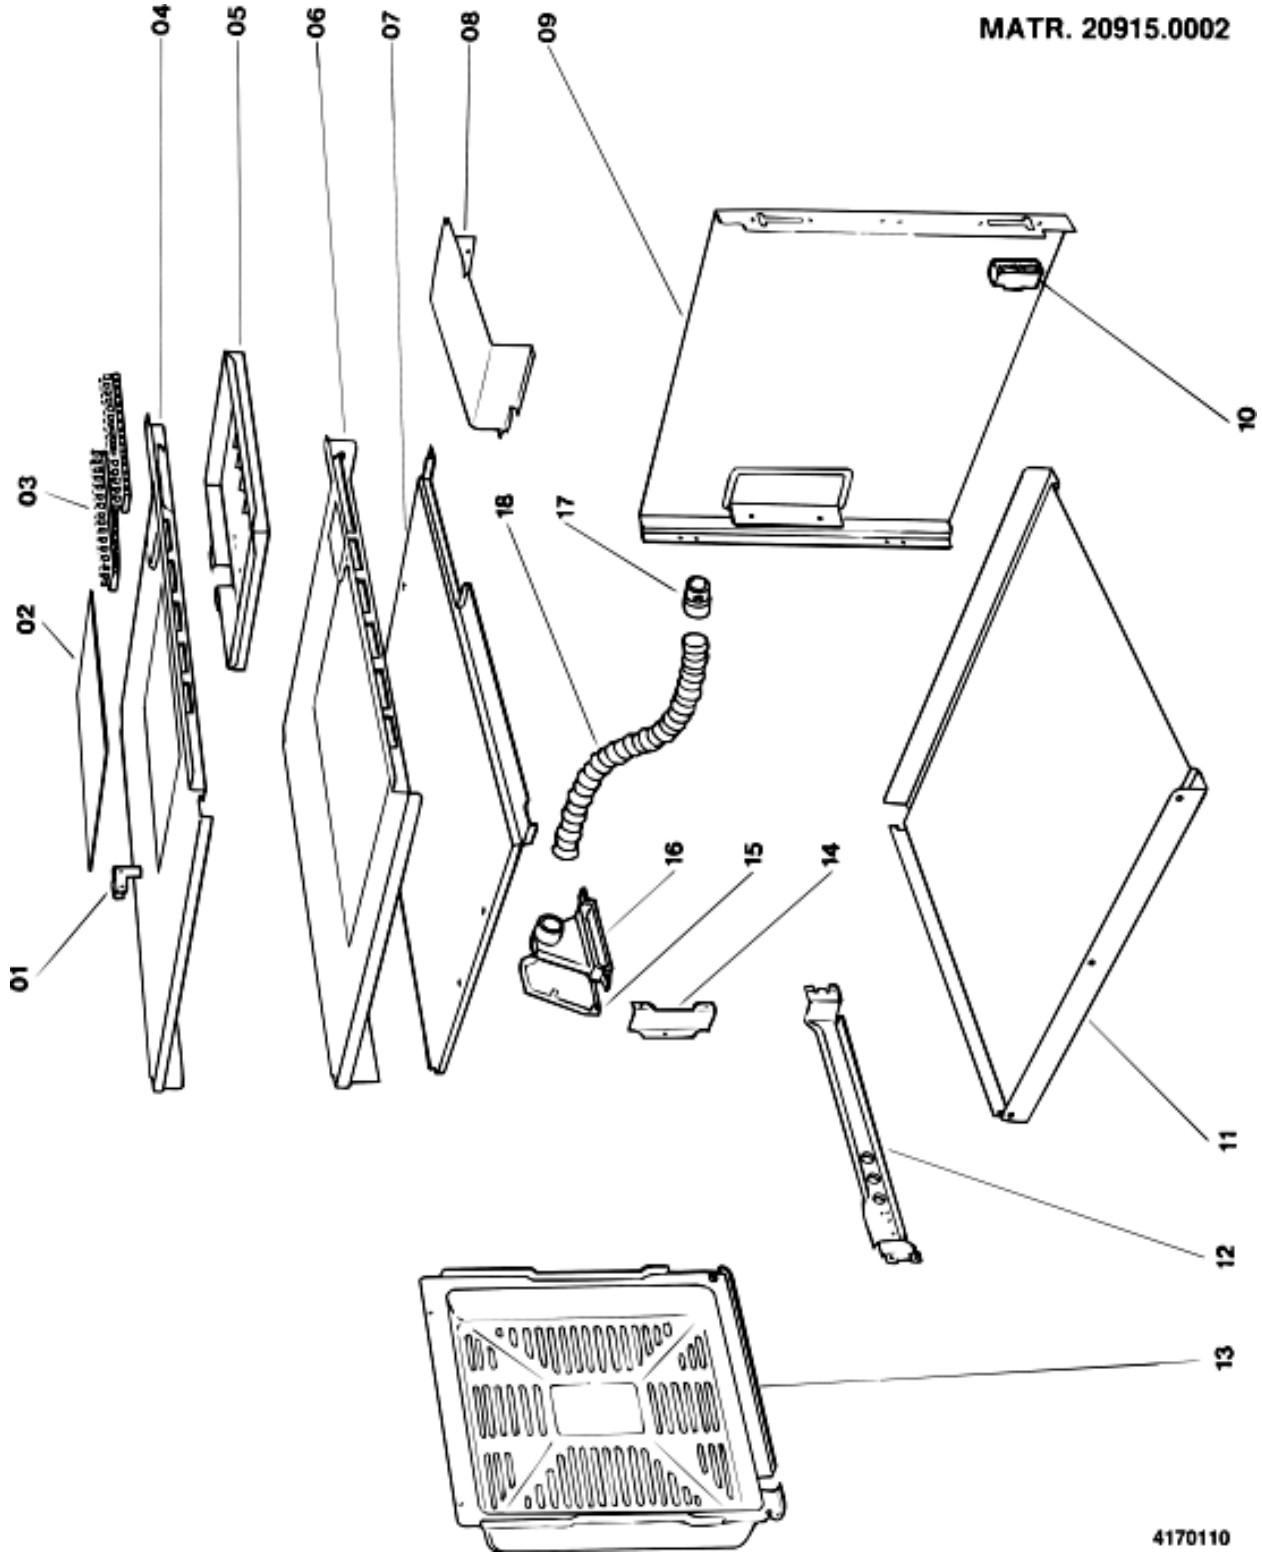

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

0417001: MODIFIED GRILL HEATING ELEMENT

As from serial no.21102.0001 a new grill heating element will be introduced which is different from the previous version since it has a new flange and is fixed to the back in a different way.
This modification concerns all models with an electric and combined oven. The new heating element is not interchangeable with the previous version, thus all muffles and the thermostat bulb springlet have been modified.
Once stocks of the premodification muffles run out, it will be necessary to substitute them with the new version together with the heating element and the thermostat bulb springlet.
The flange on the new heating element can no longer be fixed with screws to the thermostat bulb springlet; the back of the new muffles are equipped to be slotted into the new springlet.
Here is a table with the relative codes:

A = Premodification heating elements
B = Modified heating elements
C = Premodification muffles
D = Modified muffles

A	B	C	D
016054	039574	032151	020860

037889	033355	039579	039580
039581	039582	039584	039585
039587	039588	039590	039591
039593	039594	039595	039596
039597	039598	039637	039638

N.B. Thermostat bulb springlet: VT = 015560; NT = 039578

0417004: BOTTOM OF ELECTRICAL OVEN CURVED FOR REINFORCEMENT

As from serial no. 30428.001 the bottom semi-casing has been modified on all appliances with electric oven in order to prevent the enamel inside the muffle from flaking.
The modification consists of a crowing on the bottom of the oven, with square raised edge;
this means that when you open the door of the oven you will notice a slight swelling on the base of the muffle.
The modification is fully interchangeable.

0417007: INTRODUCTION OF FIXED FULCRUM HINGE

As from serial no. 60115.0001, a new "fixed pin" hinge is used on all Ariston ovens, excluding the models of the "convex one-piece" and "traditional" range models.
This has required modification of the hinge, oven, uprights, bottom facia, bottom profile, glass oven door and inner door supports.
The modified parts are not interchangeable with the premodification parts which will continue to be supplied normally.

n1005010: Commutator for 7 cuochi oven 025130

Two commutators are being handled at the same time with SAT part number 025130
(EGO and DREEFS).
The two commutators are interchangeable with one another, respecting the positions of the contacts as indicated below:

Commutator B: EGO Supplier
Commutator A: DREEFS Supplier

Contact correspondence:

Staring with commutator B and with the right-hand contact near the spindle:

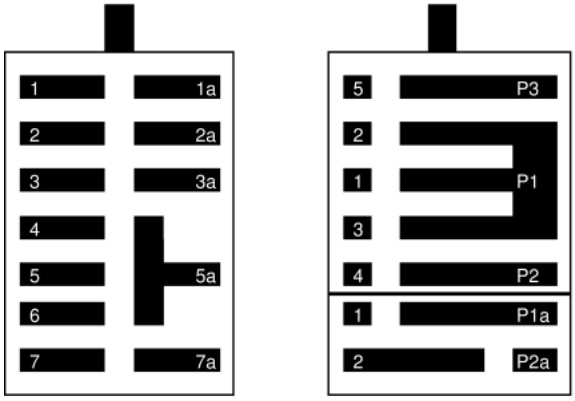

Contact P3 on B = Contact 1a on A
Contact P1 on B = Contact 2a on A
Contact P2 on B = Contact 3a on A
Contact P1a on B = Contact 5a on A
Contact P2a on B = Contact 7a on A

Staring with commutator B and with the left-hand contact near the spindle:

Contact 5 on B = Contact 1 on A
Contact 2 on B = Contact 2 on A
Contact 1 on B = Contact 3 on A
Contact 3 on B = Contact 4 on A
Contact 4 on B = Contact 5 on A
Contact 1 on B = Contact 6 on A
Contact 2 on B = Contact 7 on A

See image "NT002400".

NT002400

Comutador A (DREEFS) Comutador B (EGO)

n1015003: Oven fan assembly

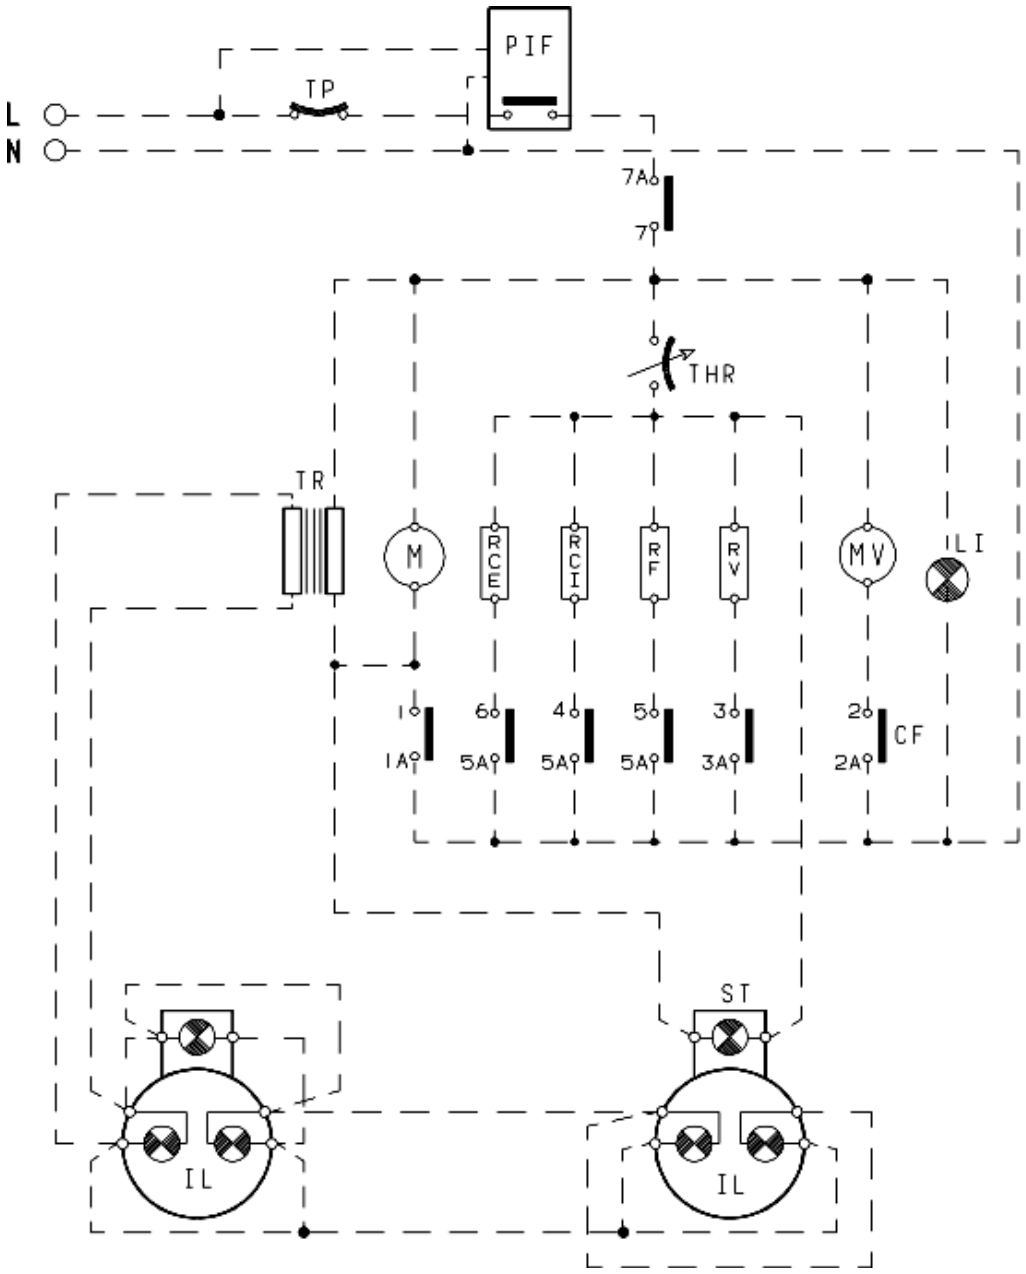

Beginning with serial no. 80715.0001 a new oven fan was introduced, perfectly interchangeable with the pre-modification one, yet different from it in that it does not have a fastening disk.
To assemble, fix the screws into the three holes within the motor structure.
When assembled, the motor will have a winding rotated anticlockwise by 60° compared to its old position.

n1015015: Method to remove the external glass of the oven door.

On all built-in cooker and oven models, when it is necessary to remove the glass from the oven door handle (to avoid breaking the handle) the glass is not removed upwards, but should be oscillated towards the right and left until the two silicone points, that unite the glass to the handle, detach.
