INDESIT company

Model type:
ARGD149KEU

Commercial code:
F061359

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

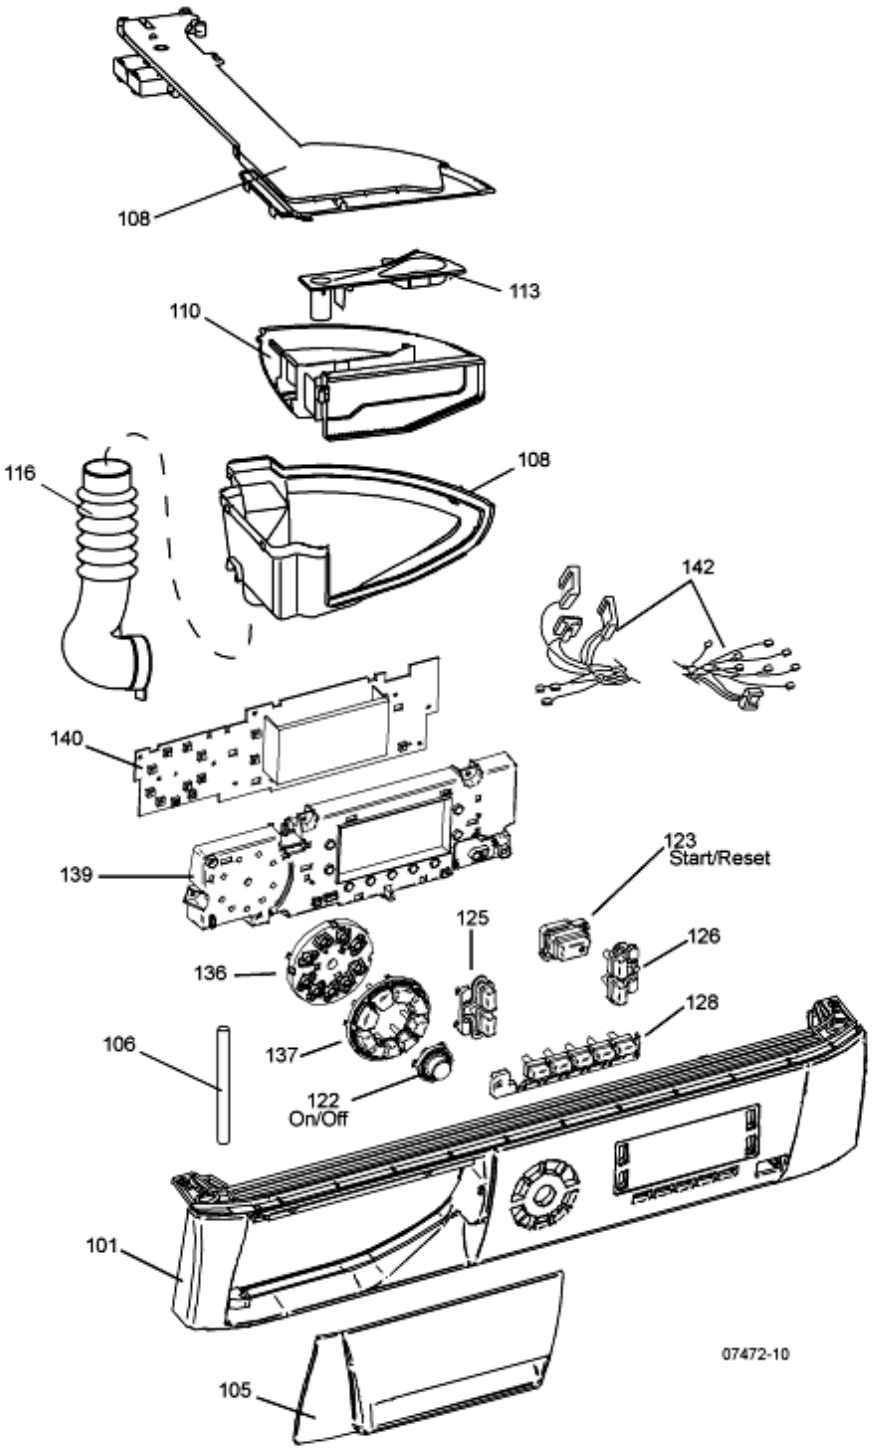

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

n4008d03: Change of Suspension Mounting Bracket

From serial number 80317.0001 all 7Kg split drum WM & 6 Kg WD's, and from serial number 80411.0001 6Kg all welded drum WM's the suspension damper mounting bracket changed in production from a screw fixing from outside of the cabinet base to a screw fixing from the inside of the cabinet base.

The two versions of mounting bracket are not interchangeable.

The damper assembly will now be supplied with the later version of mounting bracket and when changing a suspension unit to a machine produced prior to 80317.0001 & 80411.0001 it will be necessary to transfer the brackets from the old to the new unit.

n4008i04: Motor identification

This motor was subject to a gradual phase into production from 80418.0001 and can be identified by the number of terminal connection tags in the motor block attached to the side of the motor.

The overload protection for this motor is vai the module, the motor can be visualy identified by only having 5 Terminal connection tags.

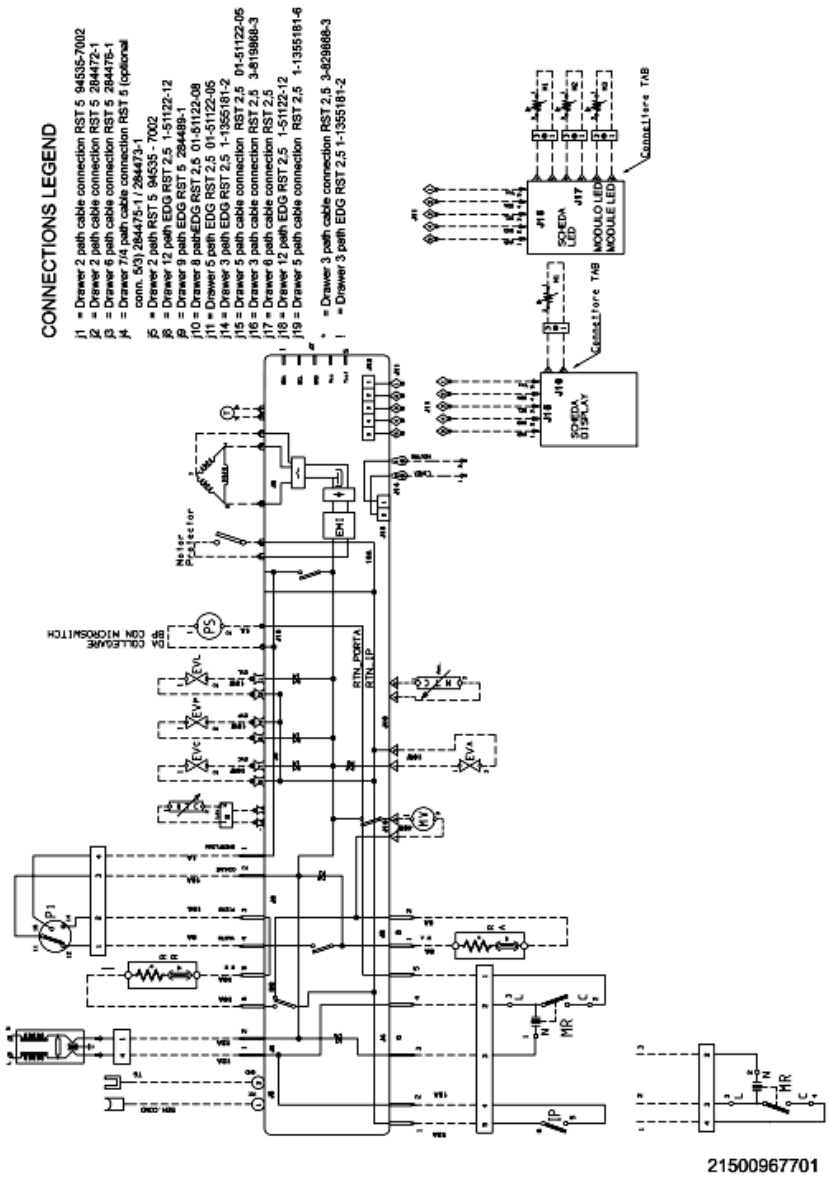

n4010a01: Dispenser Modification

From 13/10/09 (91013.0001) the moulded extension piece that attached the dispenser to the valve mounting bracket was removed and the length of the dispenser track from valves to dispenser body increased. Along with the dispenser modification the valve mounting bracket also changed in dimension and is now fitted internally to the cabinet.

The latest version of dispenser assembly is interchangeable with the original, while the part code C00115441 (1604485) remains the same it is now a kit that includes the latest dispenser assembly C00268761 and valve mounting C00143652.
