

Model type:
TLAA10

Commercial code:
F077767

General notes

Technical Documentation guidelines

You can find herewith some generic information to simplify cunsulting of technical documentation:

1. Models of same range share the same exploded views, which report the richest set of spare parts:generally, a model does not necessarly have a related spare part for each particular shown on exploded views.

2. Some spare parts can not be represented directly on the exploded views (instruction booklets, specific kit, etc...). You can find those codes in the spare parts list with the same reference of particular where spares are installed or with references 099, 999. Instruction booklets, once managed, appear with 000 reference.

3. On the higher right site of each exploded view there is a serial number which indicates the beginning of the production of certain range:some models might have more than an exploded view for a given category, each distinguished by a different serial no.and linked to another spare parts list, In this case, serial no. is required to supply the right spare part code. Exploded view to be considered is the one with a more recent serial no. but previous than the one of the model that needs assistance.

4.Exploded views might require further updates even after publishing. Addition of new spares will go on following the already existing numeration references. Revision number of an exploded view is shown into last four digits of serial number into upper right hand corner.

5.The spare parts list associated to an exploded view shows related codes of spares managed for a certain model; for each spare part other informations are available:

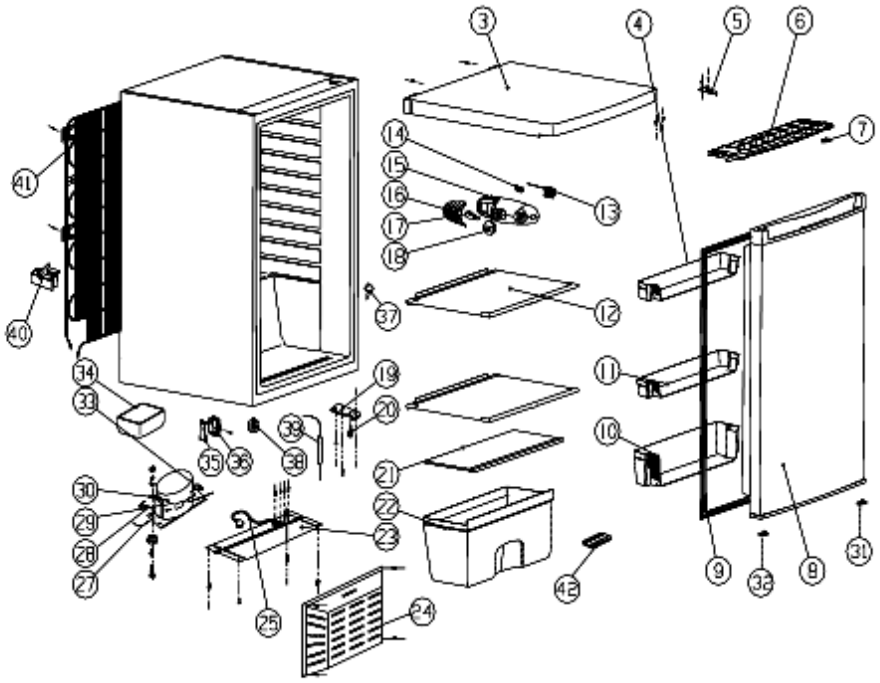

REF: reference no of spare into a table; SUBSTITUTE: list of spare(s) which can replace a code but that keeps same functional characteristics

INDUSTRIAL CODE: list of variables of a model (shown into model label) where such spare is used; NOTICE: code of information(s) to refer to complete technical intervention, track for changes or to find correct spare part code.

6. Some notices, into a same section are generic therefore cannot be directly linked to a spare part. In order to assist a model in the best way as possible, it is helpful to pay attention to all notices and constantly verify documentation updates

7.Technical documentation cover shows model name and its commercial codes

Notices

n2512l00: IN CASE OF REPLACEMENT OF COMPRESSOR WS60YT

If the original compressor of the product is WS60YT, an alternative compressor QD35YV will be shipped.
In this case you must also order the drain pan with code C00296105 because the previous one, due to different shape of the shell of the compressor QD35YV will no longer be mountable.

n2512l01: COMPRESSOR & CONDENSER STUB SIZES

--Replacement COMPRESSOR--
Compressor QD35YV stub sizes:
Process = 8mm
Suction = 8mm
Discharge = 7mm
Where QD35YV compressor is replacing the WS60YT compressor then also order dissipator C00296105.
--CONDENSER--
Condenser stub sizes:
Inlet = 4.75mm reduces to 4mm (17mm from end of tube)
Outlet = 4.75mm reduces to 4mm (17mm from end of tube)
--DISSIPATOR--
The dissipators in the parts list are not interchangeable due to the difference in profile shape between compressors WS60YT & QD35YV.
To select the correct dissipator you will require the type name from the compressor.
Compressor type WS60YT use dissipator C00292141.
Compressor type QD35YV use dissipator C00296105.

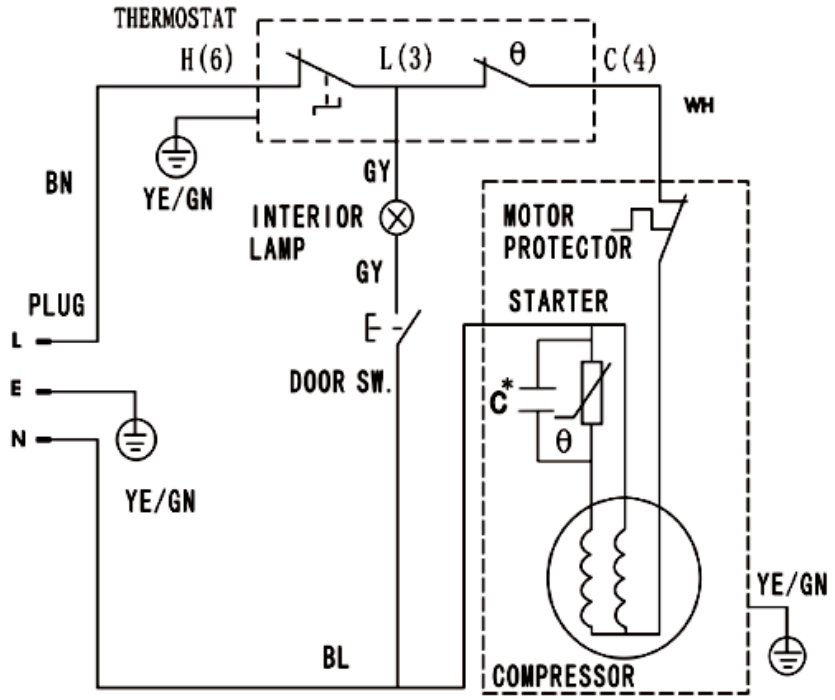

LOKRING USERS ONLY
The following Lokrings will be required to connect the Compressor Discharge and Dryer to the Condenser:
Discharge to Condenser = Lokring 7mm x 4mm C00295744
Dryer (Molecular Filter) to Condenser = Lokring 5mm x 4mm C00248934
--Replacement CONDENSER--
It may be necessary to cut off the first 17mm of each tube end to access the 4mm tube.

n2513c00: DRYER LOKRING TYPE

LOKRING USERS ONLY
The following Lokring will be required to connect the Dryer (Molecular Filter) to the Condenser:
Lokring 5mm x 4mm C00248934
